

Platform Idea - One pager

RemitAI is a fintech platform designed to help diaspora communities optimize their cross-border money transfers. Cross-Border Remittance Tracker + Optimizer targets a massive pain point in a \$800B+ global remittance market. Our MVP is focused on the USA to Bangladesh corridor, which sees over \$4.3 billion in remittances annually. Migrants often lose 3–5% of their hard-earned money due to poor FX rates, hidden fees, and bad timing. We solve this with a clean, AI-powered comparison and alert platform.

The Problem

Millions of users across high-volume remittance corridors like the USA–Bangladesh struggle to find the best provider when sending money. They compare rates manually, fall victim to hidden markups, and rarely know the optimal time to send. There is no single, transparent, localized tool that helps users consistently save on their transfers.

Our Solution

RemitAI is a mobile-first platform that compares live FX rates and fees across major platforms like Wise, Remitly, Xoom, Western Union, Taptap Send etc. It offers AI-based recommendations on the best platform to use at a given time, smart alerts (e.g., notify me when USD/BDT > 125), and a savings dashboard showing how much users save over time.

Why Now

The remittance industry is undergoing digital transformation. Users increasingly prefer app-based money transfers. However, there's a trust gap in choosing providers and no intelligent tool that optimizes for timing and payout. With remittance volumes rising post-COVID and digital adoption peaking, the opportunity is now.

Market Opportunity

USA to Bangladesh remittance volume is ~\$4.3B/year. Approximately \$2.6B is handled digitally. With over 6–10 million annual transactions, capturing even 1% of this segment through affiliate commissions and premium tools could yield \$100K–\$500K/year in early revenue.

Roadmap & Go-to-Market

We are building a MVP launching in 12 weeks, bootstrapped alongside a full-time fintech career. Initial go-to-market includes diaspora Facebook groups, SEO, and remittance influencers. After Bangladesh, we'll expand to other underserved corridors like Pakistan, Nepal, and Sri Lanka.

Research Output

1. Problem

Millions of people (especially migrant workers and diaspora communities) send money internationally. But they often:

- Overpay due to hidden FX markups or fees
- Don't know which service is cheapest or fastest
- Miss opportunities to save due to FX rate timing

2. Solution

A web/mobile platform that:

- **Tracks real-time FX rates + total fees** across remittance services (Wise, Western Union, MoneyGram, banks, etc.)
- Uses **AI to recommend the cheapest & fastest** service for a specific corridor (e.g., USA to Bangladesh)
- Offers **alerts** when rates improve
- Includes a “**send later**” + **automated scheduling** tool for better FX windows
- Provides a **comparison of transfer speeds, payout methods**, and user ratings

3. Key Features

Feature	Description
Live Comparison	Aggregates FX + fees + delivery time
AI Optimizer	Suggests best send time & service
Smart Alerts	Push/email alerts for preferred corridors
Scheduled Transfers	Automate transfers for the best future rates
Transfer History	Track and analyze past savings

4. Target Audience

- **Migrant workers** (GCC, Europe to South Asia, Africa, etc.)
- **Expats/diaspora communities**
- **SMEs doing small cross-border payments**

5. Monetization

A. Affiliate/Referral Revenue

- Earn per transfer completed via API/integration (any way to ensure our link is used to make payment through third party service)
- Wise, Remitly, Western Union, Skrill, and others offer affiliate programs

B. Ads/Promotions

- Premium placement for services (e.g., featured partner on search results)

C. Premium Tier (Freemium Model)

- Unlimited alerts
- Early access to "FX prediction"
- Advanced transfer analytics
- Ad-free experience

D. Data & Insights (B2B SaaS)

- Sell anonymized remittance trend data to fintechs, research firms (issues with compliance and regulations)

6. MVP Stack

- Frontend: React Native (mobile), Next.js (web) (React TypeScript)
- Backend: Python Django
- FX APIs: CurrencyLayer, OpenExchangeRates, or partner APIs
- Data aggregation: Web scraping + API feeds
- AI model: **Time-series for FX prediction + route recommendation (LLMs - Deepseek)**

7. Lean Canvas

Block	Description
Problem	Lack of transparency in remittance costs
Customer Segments	Migrant workers, expats, small businesses
Unique Value Prop	Save money on every transfer with AI-backed recommendations
Solution	FX + fee comparison, alerts, AI optimizer
Channels	SEO, expat communities, influencer marketing
Revenue Streams	Affiliate commissions, ads, premium tier
Cost Structure	API access, dev & infra, marketing
Key Metrics	CAC, LTV, active users, successful referrals
Unfair Advantage	Proprietary AI optimizer, multilingual interface, corridor-specific focus

How is this different from websites like xe.com or monito.com?

1. Actionable AI + Automation (Not Just Comparison)

Monito shows comparisons. RemitAI goes further:

- **AI timing optimizer:** Tells users *when* to send for the best rate, not just *who* is cheapest now.
- **“Send Later” scheduling:** Automates transfers when FX rate hits a user-defined threshold. (Need to link with their payment provider?)
- **Smart alerts:** Personalized, corridor-specific push/email alerts powered by FX trend prediction.

2. Corridor-Specific Depth

Focus on **specific, high-volume remittance corridors** (e.g., USA to Bangladesh, UAE to Bangladesh, KSA to Pakistan, UK to Nigeria), offering:

- Real-time **payout method availability** (bank, cash pickup, mobile wallet)
- **Local partner support** info (e.g., pickup location density)
- Tailored recommendations for migrant workers or specific use cases

Monito and XE are broader, but we go deeper per corridor.

3. Financial Empowerment Layer

Offer:

- **Micro-saving recommendations** from remittance leftovers
- **Remittance budgeting tools** (monthly goal planning, savings suggestions)

This builds **trust and retention** beyond price comparison.

4. Multilingual and Culturally Optimized UX

Monito and XE are more western/global in UX. Our version:

- Prioritizes local languages (e.g., Bangla, Urdu, Arabic)
- Simple UI/UX for first-time smartphone users (simple in terms of what?)

5. Community-Driven Ratings + Feedback

Let users **rate** remittance experiences:

- Actual delivery time
- Pickup issues
- Customer service reviews

Turn the platform into a **trust hub** — not just a comparison tool.

6. Monetization Twist

You're not just an affiliate. You can:

- Offer **tiered subscriptions** for advanced users (e.g., frequent senders, SME transfers)
- Build **white-labeled B2B versions** for local financial agents or fintechs

Current User Journey

1. Trigger Event (Why they send money)

- Monthly family support (most common)
- Emergency (health issues, natural disasters)
- School fees or religious donations
- Special occasions (Eid, weddings, etc.)
- Business support (for SMEs or family businesses)

2. Decision Stage

User thinks:

- “How much do I need to send?”
- “Which service should I use?”
- “What’s the best rate and lowest fee right now?”
- “How fast does it need to arrive?”

Pain Points:

- Overwhelmed by options (banks, Wise, Western Union, etc.)
- Doesn’t understand hidden FX markups
- Confused by delivery options (bKash, bank deposit, cash pickup)
- Worried about reliability or scams

3. Research + Compare

User will:

- Check 2–3 apps (Wise, Remitly, Western Union)
- Ask friends or search “best way to send money to BD”
- Look for:
 - **FX rate**
 - **Transfer fee**

- **Estimated delivery time**
- **Available payout methods**

Tools used:

- Phone (mobile-first behavior)
- Google Search
- Remittance apps or aggregator websites

4. Decision Made – Sending the Money

They:

- Sign in to their chosen service
- Enter amount, recipient name, bank info or mobile number (e.g., bKash)
- Review total amount to be received
- Complete payment (often using debit/credit card or ACH)

Pain Points:

- Card/transfer limits
- Confusing UI
- Unexpected last-minute fees
- FX rate dropped before they clicked "Send"

5. Delivery & Confirmation

Recipient in Bangladesh:

- Gets a **bKash** payment, **bank deposit**, or **cash pickup**
- Confirms via phone or SMS

User in USA:

- Gets confirmation email or SMS
- Sometimes follows up to confirm with family

6. Post-Send Behavior

- Checks **past transactions** for budgeting
- May plan next remittance (monthly cycle)
- Looks for **better rates next time**
- Tells friends if the experience was good/bad

7. Frustrations & Gaps

- No **alert when rate improves** before sending
- Feels unsure if they got a good deal
- Has no **central place to compare options quickly**
- No way to **automate monthly sending** at best FX window

Comparison Matrix

Feature	Monito	XE	Wise	RemitAI
Real-time FX Rate Comparison	Yes	Yes	Yes	Yes
Includes Fees in Final Cost	Yes	No	Yes	Yes
Provider Trust Scores/User Reviews	No	No	Limited	Yes
AI-based Rate Predictions	No	No	No	Yes
Send-Later Scheduling	No	No	No	Yes

Wise/Monito/XE is like **Apple Music** (you listen to what they offer).

RemitAI is like **Spotify with smart playlists** — you see **all the best options**, and help users choose **what's best for them** at any given time.

MVP Features

1. FX + fee comparison (Wise, Remitly, etc.)
2. AI-based recommendation (best provider based on fees/speed) (threshold to spend?)
3. Alert system (email/SMS when rate improves)
4. "Send Later" manual tracking tool
5. Partner referral tracking (affiliate links)
6. Bangladeshi UX (simple UI, local examples)

Do FX Rates Really Vary Across Platforms?

Even within a single hour, the same transfer (e.g., \$200 to Bangladesh) can yield **very different payout amounts** depending on:

- FX rate markup (some use mid-market, some add 1–4%)
- Transfer fees (flat or %)
- Payment method (ACH, debit card, credit card)
- Delivery method (bank deposit, bKash, cash pickup)

Real-World Example (USA → Bangladesh)

Let's take **\$200 USD** sent to Bangladesh. At a given time:

Platform	FX Rate	Fee	Receiver Gets
Wise	1 USD = 109.20 BDT	\$2.80	21,680 BDT
Remitly (Express)	1 USD = 106.00 BDT	\$3.99	21,200 BDT
Xoom	1 USD = 105.20 BDT	\$2.99	20,880 BDT
Western Union	1 USD = 103.50 BDT	\$0–\$4	~20,700 BDT

- **Difference in payout:** Up to **1,000 BDT (~\$9.00 USD)** on a \$200 transfer — that's **4–5% variance** just by choosing the right platform.

These differences can be even bigger during:

- FX rate volatility (USD strengthening/weakening)
- Holidays or high-volume periods (Eid, end-of-month)
- Payment method changes (card vs ACH)

How Often Do Rates Change?

- **Wise** updates rates every few seconds
- **Remitly, Xoom, WU** update every few minutes or based on payment method
- **Banks** often update once per day (and use higher markups)

So yes — **rates change frequently**, sometimes several times per hour, and can result in meaningful differences in payout.

What This Means for RemitAI:

- **Daily rate variance is real and painful** for users sending money often
- RemitAI platform provides:
 - **Visibility** into those fluctuations
 - **Savings** through smart provider switching
 - **Peace of mind** via alerts or send-later tools

Market size for RemitAI, focused on the USA to Bangladesh corridor

1. TAM (Total Addressable Market)

Global remittance market:

- ~\$860 billion globally in 2023 (World Bank)
- Digital remittances = ~\$200B+ and growing fast

Bangladesh inbound remittance:

- \$21.6 billion received in 2023
- 5th largest recipient globally

From the USA:

- ~17–20% of total comes from the USA
- That's about \$4.3 billion/year

TAM: ~\$4.3 billion sent annually from USA → Bangladesh

2. SAM (Serviceable Available Market)

Targeting **digitally active senders** — likely to use apps, comparison tools, or alerts.

Assume:

- ~60% of the remittance volume is handled through **digital/mobile-first platforms** (Wise, Remitly, Xoom, etc.)
- That's ~\$2.6B/year

Average transfer = \$250–400

So ~ **6–10 million transfers per year**

SAM: ~\$2.6B in digital transfer volume or ~6–10M annual transfers

3. SOM (Serviceable Obtainable Market)

MVP will first:

- Focus only on USA → Bangladesh
- Reach early adopters through Bangladeshi communities in NYC, LA, Detroit, etc.

Assume:

- Capture **0.5–1%** of digital users in Year 1
- That's **60K–100K transfers/year**
- Average affiliate fee = \$2–5 per transfer

SOM (Year 1 Revenue Potential): \$120K – \$500K in annual referral commissions

- Optional: **Premium alerts**, ads, or B2B revenue (if we license tool)

Expansion Potential

Once we prove traction in the BD corridor, we can expand to:

- India, Pakistan, Nepal, Philippines (Top 5 corridors)
- GCC & US/EU remittance senders
- Add corridor-based personalization, B2B tools for remittance agents

That pushes TAM to **tens of billions of USD**.

Summary:

Metric	Estimate
TAM (USA to BD)	\$4.3B/year
SAM (Digital transfers)	\$2.6B/year
SOM (Year 1 goal)	~\$120K–\$500K revenue from 60K–100K transfers

Are there FX APIs for all remittance senders?

1. Platforms That Usually Have FX APIs (or can be accessed via 3rd parties)

Platform	Public API Available?	Notes
Wise	Yes	Transparent mid-market FX API
CurrencyLayer / OpenExchangeRates	Yes	Mid-market only (not platform-specific)
Remitly	No public API	Can be scraped or requested via partnership
Xoom	No public API	Scraping required
Western Union	No public API	Scraping required
Taptap Send	No public API	Partner-only access; scraping is needed

Workarounds for Platforms Without APIs

A. Web Scraping (Ethical + Controlled)

- Use tools like Puppeteer, Selenium, or no-code scrapers like Browse.ai, Apify, or Bardeen
- These tools can automatically:
 - Open the remittance page
 - Input a fixed send amount (e.g., \$200)
 - Capture the exchange rate + payout amount
- Scrape every hour or on user request

Downside:

Websites may block repeated scraping or change layout. So you need to scrape gently, cache results, and only refresh hourly.

B. Manual Update in Database

For MVP, you can:

- Manually update FX/payout rates from platforms like Xoom, WU, Taptap 2–3 times/day
- Store them in Airtable or Google Sheets (mongodb or leveldb in key obj format or pgsql tables)
- Show the timestamp: “Updated at 4:00 PM EST”

This is 100% fine for MVP — users are mostly looking for relative comparison.

C. Partner Integrations (Long-term)

Once we gain traction, we can:

- Apply for affiliate or API access to Wise, Remitly, Taptap
- Platforms will give us better rate access if we’re driving them volume
- Some (like-Wise) offer per-transfer commissions + FX APIs

Conclusion:

Stage	Best Method
-------	-------------

MVP	Manual + smart scraping (via Browse.ai or Airtable forms)
-----	---

Beta	Combine scraping + FX APIs (Wise, CurrencyLayer)
------	--

Scale	Secure partner APIs + optimize with AI recommendations
-------	--

Top remittance platforms in the USA-Bangladesh Corridor

1. Remitly
Offers quick transfers with options for bank deposits, cash pickups, and mobile money. Known for competitive exchange rates and transparent fees.
2. Wise (formerly TransferWise)
Provides transparent fees and real exchange rates, suitable for bank transfers. Emphasizes no hidden charges.
3. Ria Money Transfer
Features a vast network in Bangladesh, allowing for cash pickups and bank deposits. Offers competitive fees and favorable exchange rates.
4. MoneyGram
Enables transfers to Bangladesh with options for cash pickup at numerous locations. Known for its extensive global network.
5. Western Union
Provides multiple transfer options, including online and in-person, with a wide network of agent locations in Bangladesh.
6. Xoom (a PayPal Service)
Facilitates quick transfers to bank accounts and cash pickup locations in Bangladesh. Integrates seamlessly with PayPal accounts.
7. WorldRemit
Offers online money transfer services with options for bank deposits, cash pickups, and mobile airtime top-ups. Emphasizes convenience and speed.
8. Sendwave
Specializes in instant transfers to mobile wallets like bKash in Bangladesh, with no fees and competitive exchange rates.
9. Taptap Send
Focuses on transfers to mobile money accounts, offering competitive rates and low fees. Known for its simplicity and speed.
10. Panda Remit
Emerging as a competitive provider with favorable exchange rates and low fees for transfers to Bangladesh.
11. Skrill
A digital wallet offering international money transfers to bank accounts and mobile wallets. Known for its user-friendly platform.
12. OFX
Caters to larger transfers with competitive exchange rates and low fees, suitable for both personal and business transactions.
13. Azimo
Provides fast and low-cost money transfers to bank accounts and cash pickup locations in Bangladesh.

14. **TransferGo**
Offers quick international transfers with transparent fees and competitive exchange rates.
15. **CurrencyFair**
A peer-to-peer currency exchange platform offering competitive rates for international transfers.
16. **Payoneer**
Facilitates cross-border payments for businesses and professionals, with multi-currency receiving accounts.
17. **Remit2India**
Specializes in remittances to South Asian countries, offering competitive rates and various transfer options.
18. **InstaReM**
Provides fast international money transfers with transparent fees and competitive exchange rates.
19. **Venmo**
Primarily a U.S.-based peer-to-peer payment app, but offers some international transfer capabilities.
20. **Cash App**
A U.S.-based app offering peer-to-peer money transfers, with some international functionality.

Top remittance platforms in the Dubai-Bangladesh Corridor

Platform	Speed	Fees	Receiving Methods	Notes
Wise	1–2 days	Low	Bank account	Best for low-cost digital transfers
Western Union	Minutes–1 day	Medium	Cash, bank, mobile	Massive rural reach
Remitly	Minutes–hours	Low–Med	Cash, bank, bKash	Great UX, quick for bKash
Xoom	Minutes–hours	Medium	bKash, bank, cash	Instant bKash support
MoneyGram	Minutes–hours	Medium	Cash, bank	Good for fast cash
Lulu/AI Ansari	Instant	Varies	Cash, bKash, bank	Convenient for in-person UAE use

19th April Discussion

- Affiliate commission for not following links through us but getting the idea
- <https://www.monito.com/>
- Scheduling of remittance - not to be incorporated at MVP level

25th May Discussion

- Web scraper building: Alvi
- UX/UI design discussion: Baha & Nafiz for 26th May
- List of platforms to scrap from: Baha

List of platforms to scrap from initially:

1. Wise
2. Taptap send
3. Remitly
4. Xoom
5. Western Union
6. [Monito.com](https://www.monito.com/)
7. Moneygram
8. Payoneer

Top platforms for UAE → Bangladesh

Rank	Platform	Why it's common / strengths
1	Remitly	Strong presence, good rates, multiple payout options (bank, mobile wallet, cash pickup) in Bangladesh. Remitly+2Remit Finder+2
2	Western Union	Very large agent network; trusted; many branches in UAE; instant cash pickup possible. Western Union Money Transfer+1
3	WorldRemit	Good digital UX; decent speed; multiple delivery options. WorldRemit+1

4	Taptap Send	Zero or low fees on many corridors; good exchange rates; popular among diaspora sending small/medium amounts. Taptap Send+2blogs.leocompare.com+2
5	Lulu Money / Lulu Exchange	Well-known in UAE; trusted, local exchange houses often used by expats. blogs.leocompare.com+1
6	Careem Pay	Emerging more recently; convenience via digital wallet; increasingly used. blogs.leocompare.com
7	e& money	Fintech wallet / app-based service; lower fees etc. The Times of India+1
8	Local Exchange Houses / MTOs (e.g. Al Ansari Exchange)	For cash-based transfers; widely used in person; reliable; often preferred by those less comfortable with digital services. Khaleej Times+1
9	Banks (via remittance desks)	Some send via banks or correspondent banks; though usually more expensive, still used especially for large amounts or where bank relationships exist.
10	MoneyGram	Known global player; used for cash pickup / agent based transfers.

Top platforms for Saudi Arabia → Bangladesh

Rank	Platform	Why it's common / strengths
1	Western Union	Strong network of agents, speed, well known among expatriate workers. Western Union Money Transfer+2TopMoneyCompare+2
2	MoneyGram	Similar presence; often used for cash pickup; reliability. Remittance Prices World Bank+1
3	Remitly	Digital option; increasingly competitive; supports bank and mobile wallet payout. Remitly+1
4	WorldRemit	Good UI/UX; multiple delivery methods; often favorable for small/medium transfers. TopMoneyCompare
5	TeleMoney / STC Pay etc	Local fintech / digital remittance / money transfer operators. Saudi-based services often cheaper in fees / better suited for local regulation. Remittance Prices World Bank+2Remit Finder+2
6	Local banks + MTOs / exchange houses	Many expats still rely on remittance services via their bank or exchange houses.
7	Ersal	Licensed service in Saudi; used for remittances & foreign payouts. ersal.sa
8	SAB International Remittance / Saudi banks' remittance desks	Banks like SAB offering remittance services with different payout options. sab.com

- | | | |
|----|---|---|
| 9 | Wise (when available) | For digital transfers / bank deposits; cost effective especially for larger sums. (Less used for cash pickup) |
| 10 | Others: smaller MTOs, informal channels (though for your platform you likely want legal / regulated ones) | |

Top platforms for USA → Bangladesh

Rank	Platform	Why it's common / strengths
1	Remitly	Very popular; good digital platform; multiple payout options; fast for many corridors. Remitly+2Remit FINDER+2
2	Wise	For bank transfers; good rates; minimal fees; transparency. Wise+1
3	Western Union	Widely trusted; very large network; many receivers prefer cash pickup or bank deposit. Western Union Money Transfer+1
4	WorldRemit	Digital; works well especially for smaller amounts; mobile wallets etc. WorldRemit+1
5	MoneyGram	Global reach; many agent locations; cash pickup. MoneyGram+1
6	TapTap Send	No/low fees and good rates; frequently used by those who prefer digital apps. TapTap Send+1

7	Xoom (a PayPal service)	Known among diaspora; integrated with PayPal; for bank or cash pickups.
8	Skrill (or similar e-wallets)	Sometimes used, though less dominant for Bangladesh remittance; possibly for speed / convenience.
9	Banks (wire transfers / remittance desks)	Still used especially for large sums or where recipients want bank deposit.
10	Informal or local MTO services (agents in immigrant communities)	Though regulated services are preferable, many users still use local agents / MTOs in immigrant communities.

Scraping information needed:

Which specific platforms do you want to scrape? (Wise, Remitly, Xoom, etc.)

Can you provide sample URLs where the rates are displayed?

Do any of these platforms offer APIs instead of scraping?

What's your sending amount and destination details for rate checking?

1) Platforms to scrape (USA → Bangladesh)

Prioritize these 10—broadly the most used/available for USD→BDT:

1. Wise
2. Remitly
3. Xoom (PayPal)
4. WorldRemit
5. Western Union
6. MoneyGram
7. Taptap Send
8. Ria Money Transfer
9. Xe Money Transfer
10. ACE Money Transfer

2) Sample rate/fee pages (public endpoints you can hit)

- **Wise** — sending page (calculates fees & final BDT): [Wise](#)
Mid-market rate pages (useful for cross-checking): [Wise](#)
- **Remitly** — corridor & converter pages: [Remitly+1](#)
- **Xoom** — corridor page and fee calculator hub: [Xoom+1](#)
- **WorldRemit** — US→BD corridor and full calculator: [WorldRemit+1](#)
- **Western Union** — USD→BD send page + price estimator + USD→BD rate page: [Western Union Money Transfer+2](#)
[Western Union Money Transfer+2](#)
- **MoneyGram** — corridor page + embedded estimator: [MoneyGram+1](#)

- **Taptap Send** — Bangladesh landing page (rates usually app-only; still useful for content + availability): [Taptap Send](#)
- **Ria** — send page and public converter (query params in URL): [Ria Money Transfer+1](#)
- **Xe** — send page and converter: [Xe+1](#)
- **ACE Money Transfer** — Bangladesh send page with calculator: [ACE Money Transfer](#)

Note: some providers render the *exact* live quote only after you pick pay-in method (ACH/debit/credit), payout method (bank/mobile wallet/cash), and sometimes after sign-in or app-only flows (e.g., Taptap). Plan on a headless browser for those.

3) Do any offer APIs instead of scraping?

- **Wise** — Yes. Official Platform API including **Rates** and **Comparison** endpoints (OAuth/Bearer; partner onboarding required). [Wise+2Wise+2](#)
- **MoneyGram** — Yes, partner/developer portal (business integration). [developer.moneygram.com+1](#)
- **Ria** — Yes, partner API (documentation exists; access via partnership). [staging-api.riamoneytransfer.com+1](#)
- **Western Union** — APIs exist under PSD2/partner contexts; access typically gated by region/compliance/partnership. [wu-priora.saltedge.com+1](#)
- **Remitly, Xoom, WorldRemit, Taptap, Xe, ACE** — No public self-serve pricing APIs; rates are primarily exposed via web/app UIs. (Company/affiliate pages exist but not as public live-rates APIs.) [Xoom+2WorldRemit+2](#)

4) “Default” test quote profile (amount + destination details)

Unless you say otherwise, I’ll standardize scrapes on this profile so results are comparable:

- **Send country:** United States
- **Amount(s):** USD 200, 500, 1,000 (three benchmarks commonly used by remitters)

- **Pay-in method:** ACH/bank transfer (primary), debit card (secondary)
- **Payout method:** Bank deposit to Bangladesh (primary); **bKash** mobile wallet (secondary when supported)
- **Receiver location:** Dhaka, Bangladesh (generic)
- **Currency:** USD → BDT
- **Notes:** Bangladesh currently adds a **2.5% government cash incentive** on received remittances via formal channels; that's applied on the **receiver side** and shouldn't be mixed into the provider's FX/fee comparison. (Some providers highlight it on their pages.)
